WEB DEVELOPMENT TOOLS

Free Hosting:

Git hub is the best tool because you can edit, push and your changes are live. Render is also fine because you can create and run all its apps and websides with free TLS certificates.

Icons:

I think is very important to stand out Flaticon's tools because it has 3 million icons in its library. The rest of them it's the same, it has a offers a collection of scalable vector icons and you can download in a variety of formats.

Docs:

I know W3Schools and I think it's a website where you can learn a lot about programming languages. Also, DevDocs is interesting because it has 100 APIs documentation for web developers.
